\* Not Shown

NOTE: Many of [www.pennparts.com](http://www.pennparts.com) schematics include changes that were either made by Penn, or errors found and corrected by our parts dept.

SBT Ver. 021514

**IMPORTANT NOTE FOR OLDER 115 REELS**

1958 to present day, the 3-115 bridge uses the 23-116 handle nut screw.

*Somewhere in between Penn made a design change:*

1950 or older reels, the 3-115 bridge used the 23-114 nut screw.

IF your current nut is stamped 23-114, you will need to order the 23-116 nut screw to go with the current version of the bridge.

**DESIGN CHANGE 1989 (PLATE/BEARING/SPOOL)**

Newer 115L bearing System

1-115 NON-HANDLE SIDE Plate (changed)

26-116 Bearing w/Cap (pressed into side plate)

29L-115 (changed)

Original system

for reels made prior to 1989

1-115

26-114 Bearing w/Nut Head

29L-115

*The easiest way to see which system your reel has is to look at the handle side bearing.*

*The old one has the nut head. The newer one is covered by a cap that is pressed into the plate, almost flush.*

**THESE OLD 1950'S STYLE PARTS ARE NOT AVAILABLE:**

136 136-117 Collar (old style outer access drags)

140 140-117 Felt Washer (old style outer access drags)

1 1-115 (50's) Original 115 plate (with outer access hole) a different #26 bearing? See 27 and 29 notes below!

We don't know if this older plate also used a different #26 bearing? See 27 and 29 notes below!

27 27-115-Early Older still..side plate that used a 40-114 bearing - which would NOT work with any of the newer 1 pc spools!

29 29M-115 3 pc style metal spool (Instead of smooth sides ramping up, it has a ringed connection at each side of the center spool piece)

THE ABOVE 1950'S PARTS ARE NOT INTERCHANGABLE WITH ONES THAT CAME LATER

There were too many changes in size of bearings and the spool shaft
